
p_manage_01 z97.bad file

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description:

We're running manage-01 in abc01. We find that a 4127-byte ./abc01/scratch/z97.bad file has been generated. It contains forty words, with the following being the first seven:

```
&1971
&9444
&abdelwa      hab
&akc3326
&almuden      a
&and2045
&anime
<etc.>
```

Is this something that can be ignored? The file size is 4127 bytes and hasn't changed since 10:51am today, so it doesn't seem to indicate a huge problem.

We're hoping we won't have to restart p_manage_01 -- but, if we must, the sooner the better.

Resolution:

[From site:] We let manage-01 run to completion and find that the words in the z97.bad file *are* searchable.

The ones that show spaces (e.g. edgewat er) are searchable with the spaces removed.

So,... there doesn't seem to be any major problem.
