

ntpd: configure: keyword "leapfile" unknown,...

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Problem Symptoms:

After adding a "leapfile" parameter to the /etc/ntp.conf file, the following message appears for the configuration:

```
ntpd[32284]: configure: keyword "leapfile" unknown, line ignored
```

Cause:

The version of ntpd on this server was 4.2.4p8. The server needs to be running ntpd version 4.2.6.

Resolution:

Upgrade ntpd to 4.2.6.
