
prd_software backup: "File removed before we read it"

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Problem Symptoms

The prd_software backup includes the following command:

```
grep -v '^exlibris\/' prd_software_a4_Detail_141115_0400.log
```

which produces the following errors in the log:

```
"Begin prd_software backup of aleph22 at Sat Nov 15 04:00:02 EST 2014
.....
DOING :tar -cvhf - exlibris/aleph/a22_1 | /bin/gzip | split -b2000m - /exlibris/
backup/aleph//prd_software_a4_141115_0400.tar.gz_
tar: exlibris/aleph/a22_1/alephe.orig/apache/htdocs/exlibris.css: File removed
before we read it
tar: exlibris/aleph/a22_1/alephe.orig/apache/htdocs/kidscat-intro.css: File removed
before we read it
tar: exlibris/aleph/a22_1/alephe.orig/apache/htdocs/course.css: File removed before
we read it
...
tar: exlibris/aleph/a22_1/alephe.orig/apache/htdocs/exlibris/aleph/a22_1/alephe/
www_f_eng/icon: File removed before we read it
...
tar: exlibris/aleph/a22_1/alephe.orig/apache/htdocs/staff.css: File removed before
we read it
...
tar: exlibris/aleph/a22_1/alephe.orig/apache/htdocs/management.css: File removed
before we read it
tar command failed {status=1}
.....
End of prd_software backup ... "
```

Defect Status

The problem is fixed in Aleph version 23 (rep_ver #20070).

Workaround

The `/exlibris/aleph/a22_1/alephe/` was renamed (by Upgrade Express) to `exlibris/aleph/a22_1/alephe.orig/`, so `/exlibris/aleph/a22_1/alephe/` no longer exists, and the file is now `/exlibris/aleph/a22_1/alephe.orig/www_f_eng/exlibris.css`.

Thus, the link in `/exlibris/aleph/a22_1/alephe.orig/apache/htdocs/` needs to be corrected from:

```
exlibris.css -> /exlibris/aleph/a22_1/alephe/www_f_eng/exlibris.css
```

to:

```
exlibris.css -> /exlibris/aleph/a22_1/alephe.orig/www_f_eng/exlibris.css .
```

In regard to the `course.css`, the `www_r_eng` has been obsolete since v19 when Course Reserves was switched from the Web to the GUI.

Thus, the `course.css` file/links in

`/exlibris/aleph/a22_1/alephe.orig/apache/htdocs` and in
`/exlibris/aleph/u22_1/alephe/apache/htdocs`

can and should be deleted.
