

## Manually add missing Date fields in Access Rights and Retention Policies

- **Product:** Rosetta
  - **Product Version:** 5.0.1
  - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
- 

### Description

As of SP 5.0.1, Rosetta supports using all Date fields as parameters in AR policies and Retention policies (DPS-13586).

However, existing installations require a manual adjustment in order for Rosetta to properly handle several fields, namely:

dcterms:issued  
dcterms:valid  
dcterms:created  
dcterms:modified

1. Add these four fields to the `webeditor_dublincore_configuration.xml` file.

An example of how this file should look like after the modification is attached for your convenience. It can be used instead of the existing one, in case your `webeditor_dublincore_configuration.xml` file was not customized or to be used as a reference.

2. Create a set where any of the above four fields are not empty.

3. Run a re-indexing process on this set.
