
How to search for an expanded field

Description

We want to expand a description of a Code into a new subfield and search for it. The Code is in tag 062\$a, the description should be in 062\$b.

Resolution

This can be done e.g. via fix_doc_do_file_08. There must be a table in xxx01/tab/import/codes.fix:

1 062##	REPLACE-STRING	\$\$bcb,\$\$bcb\$aComputerchip-Cartridge
1 062##	REPLACE-STRING	\$\$bcd,\$\$bcd\$aComputerdisk
1 062##	REPLACE-STRING	\$\$bce,\$\$bce\$aComputerdisk-Cartridge

In xxx01/tab/tab_expand you can add the routine to the various e.g.

WEB-FULL expand_doc_do_file_08 codes.fix (to show the description in Opac)

If you want to search for the description, you have to add it to Expand Menu WORD:

WORD expand_doc_do_file_08 codes.fix

- **Product Version:** Version 20-23
- **Relevant for Installation Type:** All

Insert parts here, from the Template list.
