
How to Resize and Relocate GUI windows

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description

How to enlarge the Correct Headings and Open Template windows in GUI Cataloging.

Resolution

The sizes of the GUI windows are defined in the .\tab\GuiSys.ini file of each module.

Check Visual Properties (right click on the upper window Title bar) to verify the name of the window.

To Resize a GUI window:

1. Open the window
2. Resize the window using the mouse
3. Right-click on the window's Title bar, and open Visual Properties.
4. Check the "Resize" check-box (and the "Relocate" checkbox if needed)
5. Press Locate.

The values will be saved in the system.

The values are saved in the following files:

For Templates: DirectoryListing in .\Aleph500\Catalog\tab\GuiSys.ini

For Correct heading: CorrectHeading in .\Aleph500\Alephcom\tab\GuiSys.ini

(Note that for this window only the right panel can be increased.)

See attachment with screen prints <https://knowledge.exlibrisgroup.com/@api/deki/files/41949/gui.resize.docx> below.
