
How to tell if Aleph Web page has been accessed

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description

How to tell if an Aleph Web page has been accessed?

Resolution

Do `cd $LOGDIR` and search for the page in the `www_server` logs. In the case of the <http://.....:899n/C> pages, one can search for accesses of all of the `www_c_lng` pages in all of the `www_server` logs like this:

```
> grep www_c_eng www_server*
```

An individual page could be searched for like this:

```
> grep 'www_c_eng/c-login' www_server*
```

But it should be noted that, since the `www_server` logs can be quite large, `aleph_startup` is set to remove logs older than 7 days:

```
setenv KEEP_LOGDIR 7 # default for keeping logs is 7 days
```

{Note: the z69 OPAC Event records do not contain these <http://.....:899n/C> transactions, only <http://.....:899n/F> (and z39.50 searches).}
