

Jboss (/Tomcat) down- what to do?

- **Product:** Aleph
 - **Product Version:** 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local
-

Question

Is jboss (/Tomcat) down - how to fix it?

Answer

1. Verify that the Jboss (/Tomcat) is indeed down

```
| ps -ef | grep "$aleph_dev/product/local/java/bin/java"
```

If running => Restart Jboss, as an Aleph user:

```
| jbin  
| ./jboss_shutdown.sh  
| ./jboss_startup.sh
```

if not running => Start Jboss, as an Aleph user:

```
| jbin  
| ./jboss_startup.sh
```

Check again, is Jboss running?

If yes – Issue resolved.

If not – contact support.
