

Incorrect data when logged in as administrator

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Question

(ARC 3.0) When logged in as user 'administrator' the data in ARC does not belong to our library. Where does it come from?

Answer

The data comes from demo scheme USMR0.

The ARC user 'administrator' is only licensed to execute backups, change configuration etc. and not allowed to execute reports.

To prevent this, the user is linked to a demo scheme called USMR0 instead of the scheme containing productive data.
