

## Logged in as a different user with the same name

- **Product:** Aleph
  - **Product Version:** 20, 21, 22, 23
  - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
- 

### Problem Symptoms:

User attempts to sign in to PDS, but ends up being logged in as a different user with the same first name.

### Cause:

The `ldap_<institute>.conf` file has the following line:

```
cn = name
```

This sets the ID to the first name of the user, instead of the username.

### Resolution:

This line should be changed to:

```
cn=user_name
```
