
Course Reading field 260\$\$c to field 008

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Problem Symptoms:

Field 008 positions 7-10 is not filled with the entry from 260\$\$c in a Course Reserves record.

Cause:

In normal cataloging the fix routine fix_doc_tag_008 for INS (xxx01/tab/tab_fix) copies field 260\$\$c to field 008.

When new documents are created from "Catalog New" in the course document list, the year is handled via xxx30/tab/tab_tag_text and you can only define a default. If there is no value, the system will default to 2000.

Resolution:

1. Change xxx30/tab/tab_tag_text to a more common default (e.g. 2014 in position 07-10 for type BK):

```
008 BK ^^^^^^s2014^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^000^^^eng^d
```

or

2. After creating the new document click on "Catalog" and save the record in the catalog mode. Then the routine fix_doc_tag_008 will be activated and will copy field 260\$\$c to field 008.
