
Identical index entries for call numbers

- **Product:** Aleph
 - **Product Version:** 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description

Identical index entries for call number are displayed in two lines in the headings list

Example:

Record 1

ABC L \$\$2A 46155\$\$hSIG123\$\$zBERF\$\$cBERFM\$\$sB

Record 2

ABC L \$\$2SIG123\$\$hZBG IV 7045-11\$\$zBERL\$\$cBERLM\$\$sE

In the index list each call number is displayed on own line.

Resolution

In the filing routine for index „call number“ which can be found in xxx01/tab/tab00.lng, column 5 and which is set in xxx01/tab/tab_filing parameter del_subfield should be added in order to delete the subfield sign.

The normalized text should look like this:

02 z01_normalized_text\$\$SGT123

Currently the normalized text for above example looks like...

02 z01_normalized_text\$\$2SIG123

02 z01_normalized_text\$\$hSIG123

... which results in 2 different index entries.
