

Dot as a wild card for SRU query

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description

How to use the dot as a wild card for SRU query.

Resolution

Searching for an Archival Resource Key (example: "ark:/48907/f3bv7dkr") in SRU can be done using dot to replace single characters.

For example:

This query return Query Syntax error:

```
http://<host>:5661/  
usm01pub?version=1.1&operation=searchRetrieve&query=(marc.024.a=ark:/48907/  
f3bv7dkr)
```

This query works:

```
http://<host>:5661/  
usm01pub?version=1.1&operation=searchRetrieve&query=(marc.024.a=ark.48907.f3bv7dkr)
```
