
SFX button on OPAC Brief view list format

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description:

The Aleph documentation discusses putting an SFX button on Full view and on Brief table view, but does not mention Brief list view.

Is it possible to do show the SFX button on list view, and if so, how?

(e.g. is there a code to add to `www_f_tab_short_999` ? nothing in `edit_doc_999.eng` looks like it would do this.)

Resolution:

It is not possible to display the SFX button on the Brief List view (custom view, `www_f_tab_short_999`).

It is possible to get SFX button to display on short-a-body, but not short-b-body.

Because `www_f_short_a_edit.cbl` has

```
WHEN "SFX"
```

```
    PERFORM EDIT-SFX-LINK
```

But `www_f_short_b_edit.cbl` doesn't.
