

Plus [+] signs in the Call numbers

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description:

The course-03 service displays ++h and ++i in the "Current Location" column for library owned-items with an LC call number. For example, in RVL50 item barcode 30207000400890 displays in the Current Location column as ++hPN1997++i.J694 2000. In the Original Location column, the barcode displays as PN1997 .J694 2000.

Resolution:

When an item's information is overridden by a temporary change, the original information is saved.

The tab100 variable "STORE-CALL-NO-DOLLAR" determines what string will replace the \$ mark in the call number when the call number field is saved.

It is suggested to use a string that will not appear as part of the call number data.
