## Message "XML reply too big for translation" in X-service item-data

- **Product:** Aleph
  - **Product Version:** 20, 21, 22, 23
  - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
- 

### Problem Symptoms:

- Using X-service item-data
- Record has more 1000 associated items
- > The resulting XML is too big to be displayed.

### For example for:

`http://<server>/X?base=xxx01&doc_number=000170356&op=item-data`

### The following reply is received:

```
<item-data>
<error>doc_num
```

### Cause:

There is a hardcoded limit for the size of the XML that can't be changed.

### Resolution:

Use X-service circ\_stat\_m instead of item.data. It less information than item-data but it has most important information from Z30 and Z36.

It has parameter START\_POINT which enables to retrieve information for documents with more than 1000 items.

See EL Commons for more information:
