
ARC report with just past week or month

- **Product:** Aleph
 - **Product Version:** ARC 2, 3
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Question

Is there a way to run an ARC report once per week or month and include only the past week/month in the report?

Answer

The periods are defined in the table PRC_CAPTION_LANGUAGE.

This table is being built during ETL (with values hard coded in the Cobol programs).

These are the contents of this table:

```
usmr0@CRN> select CAPTION_NAME from PRC_CAPTION_LANGUAGE;
```

```
**** Hit return to continue ****
```

```
CAPTION_NAME
```

```
-----
```

```
morning
```

```
noon
```

```
evening
```

```
night
```

```
1
```

```
2
```

```
3
```

```
4
```

```
5
```

```
6
```

```
**** Hit return to continue ****
```

```
CAPTION_NAME
```

```
-----
```

```
7
```

```
lastweek
```

```
lastmonth
```

```
lastquarter
```

```
lastyear
```

Additional Information

A possible example for defining the last month could be the following definition.

```
[Budget Presentation Layer].[Orders].[Order Date] between  
_first_of_month(_add_months(current_date,-1)) and  
_last_of_month(_add_months(current_date,-1))
```

You might look up the actual report query in Report Studio by clicking on 'XML' (Show specification) and use it as an example for new reports.
