

Webservices SOAP in WSDL end point to the load balancer

- **Product:** Rosetta
- **Product Version:** All

- **Desired Outcome**

The WSDL end point is currently pointing to the server DNS and the customer would like to change it to use the load balancers.

- **Procedure**
 1. Apply the WSDL in SOAP
 2. Right click on the project and go to "Show interface viewer"
 3. Select service endpoint tab
 4. Add the correct endpoint you want to use
 5. remove the old one, assign to all requests
 6. Make a new request - see that the endpoint is correct now.
