

file-90: Creation of code for field 049 from field 981

- **Product:** Aleph
- **Product Version:** 22, 23
- **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care

Question

Is it possible to create a field 049 for "Advanced Generic Vendor Records Loader (file-90)" from the text in field 981?

Answer

This can be done by using routine fix_doc_do_file_08.

Example:

Incoming record has field 981\$\$e4 or 981\$\$e533. the following translation should be performed:

981\$\$e4 move to 049\$\$aABC

981\$\$e533 move to 049\$\$XYZ

An according routine was added to xxx01/tab/import/049_fix:

```

!   2   3   4   5   6   7           8           9
!-!!!!!!-!!-!!-!!!!-!!!!-!!!!!!-!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!-
!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!
1 981##          COPY-FIELD          998
1 998           DELETE-SUBFIELD      a
1 998           DELETE-SUBFIELD      b
1 998           DELETE-SUBFIELD      d
1 998           DELETE-SUBFIELD      f
2 998           REPLACE-STRING       $$e4, $$eABC
2 998           REPLACE-STRING       $$e533, $$eXYZ
3 998##          CHANGE-FIELD         049
3 049           CHANGE-SUBFIELD      e, a

```

The codes (ABC and XYZ) are the relevant mapping and loading codes for the following tables and have to be set there too:

xxx01/tab/tab_mapping

xxx50/tab/tab_loader

xxx50/tab/tab_loader_def

The routine is added the following way in xxx01/tab/tab_fix:

FIL90 fix_doc_do_file_08 049_fix

You may also choose another name for the fix routine. The routine will be activated and can be used after the PC server is restarted.
