

ARC ETL - full mode with reduced date range

- **Product:** ARC
 - **Product Version:** 4.5
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Question

When setting the date range in `arc_conf_table.conf (/exlibris/aleph/u2n_1/xx50/tab)` to e.g. the last 2-years only and then run ETL in 'full' mode, will the data already held on ARC for earlier years be automatically removed, or just not updated?

Answer

When running a Full ETL all records are deleted and afterwards newly created according to the setting in `arc_conf_table.conf`. This means that no older records remain.
