

CTRL F3 and View Docs to remote AUT library

- **Product:** Aleph
 - **Product Version:** 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description

Customer is working with a remote AUT library. When opening an index list with CTRL+F3 in the remote AUT database and clicking on "View Docs" then you'll never get a result list but always the message that there are no related docs. This is not true.

Resolution

Problem is solved with rep_change #2338 (Aleph 22) and #2027 (Aleph 23)

Description: Catalog - When opening an index list with CTRL+F3 in a remote AUT database and clicking on "View Docs", no record can be found (since the AUT is remote) and an error message is displayed. However, the message is misleading: "There are no bibliographic records attached to the authority heading".

Solution: This has been corrected. Now, the message mentions when pressing "View Docs" in a remote AUT - "This action is denied for a remote Authority library."
