

```
245##          edit_field
-->          translate_text ALL,STR=(::-\U0060-\U0027,CASEIGN=Y)
```

**Here the character 0060 will be translated to 0027 for field 245##. 245## can be changed to any other field where the translation is needed. It's also possible to add other characters in another line.**

**Viewing now the sample record with the expand routine shows that the character is properly translated:**

```
