
Summon: Considerations when using other link resolvers

- **Product:** Summon
-

What do I need to consider when using Summon with a link resolver other than 360 Link?

When using other link resolvers with Summon, please consider that it is important to make sure that the holdings information in the Client Center matches that of your link resolver's administration module. If you list something in your Client Center profile that is not listed in the other link resolver's administration module, then you may see results in Summon that do not have a corresponding article link. If you list a holding in your link resolver's administration module that you do not list in the Client Center, then you may not receive the expected results in Summon.
