

Summon: Publication Date Facet

- **Product:** Summon

What are the ways I can use the Publication Date facet in Summon 2.0?

Use the Publication Date facet to quickly filter search results by date published:

Expanded Publication Date Filter

Initially, users can filter results to items published in the last year, the last 3 years, the last 5 years, or the last 10 years by selecting the respective button.

By selecting the **Pen** button, users can specify a start and end date to limit the results to items within that time period. Users can either specify the dates manually or select the Calendar icon to select days from a calendar.

Select the **Clear** button if you want to clear both the start and end dates. The end date defaults to the current date.

The display of dates is localized based on the language displaying in the user's Summon interface (the [Settings](#) page in the Summon Administration Console offers many languages you can make available to your users).
