

Summon: Related Topics

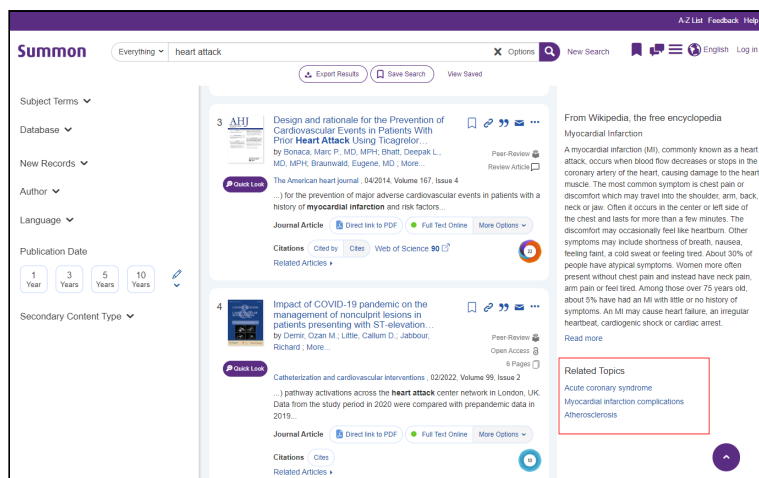

- **Product:** Summon

What are Related Topics, and how do we set them up for our patrons?

Note

This page is part of a [larger set of documentation](#) about the Summon Topic Explorer.

Related Topics are additional subjects that relate to the Summon Topic displaying at the top of the [Topic Explorer](#) pane. In the below example, the Summon Topic is Myocardial Infarction and the Related Topics are Cardiac Arrest, Stroke, and Pulmonary Embolism:

The screenshot shows the Summon search results page for the query 'heart attack'. The interface includes a search bar, filters for subject terms, database, and publication date, and a list of search results. On the right side, there is a 'Related Topics' pane with a red border, listing 'Acute coronary syndrome', 'Myocardial infarction complications', and 'Atherosclerosis'. The main content area displays two search results, each with a title, author, and a brief description. The first result is 'Design and rationale for the Prevention of Cardiovascular Events in Patients With Prior Heart Attack Using Ticagrelor...' and the second is 'Impact of COVID-19 pandemic on the management of nonculprit lesions in patients presenting with ST-elevation...'.

Note

The Topics pane may display other languages (such as Dutch), but the Related Topics appear only in English.

How Related Topics Work

When Summon identifies a relevant topic to display in the Topic Explorer on the right side of the Summon results page, Summon also processes an algorithm to identify relevant topics that may be of interest to the user. A maximum of three related topics will display.

Clicking on a related topic generates a new Summon search. Topics with multiple words generate a phrase search where double quotes are included around the search terms.
