
Ulrichsweb: EZproxy Set-Up

- **Product:** Ulrichs
-

How do we set up EZproxy for the Ulrichsweb interface?

The Ulrichsweb service is available as a non-SSL (HTTP) and an SSL (HTTPS) site. Both versions are available to all libraries. For standard linking to Ulrichsweb, the non-SSL version will be adequate for most libraries. For libraries seeking an additional level of security for their patron log-ins, you may use the SSL URL. Follow the appropriate instructions below.

If you have activated [linking from the E-Journal Portal to Ulrichsweb](#), please follow the instructions for the SSL (HTTPS) version.

Non-SSL (HTTP) Site

For standard linking to Ulrichsweb through your EZproxy, perform these steps:

1. Add the following information to your EZproxy Configuration File:

```
T Ulrichsweb
U http://ulrichsweb.serialssolutions.com
HJ ulrichsweb.serialssolutions.com
```

2. Restart EZproxy.
3. When you embed the Ulrichsweb URL into your library's web pages, prepend your EZproxy prefix to the beginning of the Ulrichsweb URL. For example, the URL you will embed into your library's website may look something like this:

```
http://proxy.university.edu/login?url=http://ulrichsweb.serialssolutions.com/
```

SSL (HTTPS) Site

For added security when your users log in, you may use the SSL version of Ulrichsweb. EZproxy supports access to secure (https://) content, such as the Ulrichsweb service, but requires enabling SSL support within EZproxy:

1. Create an SSL Certificate for use with EZproxy. See [detailed instructions from OCLC](#).
2. Your EZproxy configuration file will require two stanzas, one for the SSL site, and one for the non-SSL site. The following stanzas should be added to your EZproxy Configuration File:

```
Option NoX-Forwarded-For
Title Ulrichsweb
URL https://ulrichsweb.serialssolutions.com/
HJ ulrichsweb.serialssolutions.com
```

```
HJ https://ulrichsweb.serialssolutions.com
HJ www.ulrichsweb.serialssolutions.com
DJ serialssolutions.com
HJ ulrichsweb.serialssolutions.com
HJ www.ulrichsweb.serialssolutions.com
HJ https://clientcenter.serialssolutions.com
HJ clientcenter.serialssolutions.com
HJ www.serialssolutions.com
HJ serialssolutions.com
DJ serialssolutions.com
HJ www.ulrichsweb.com
HJ ulrichsweb.com
DJ ulrichsweb.com
```

3. Restart EZproxy.

4. When you embed the Ulrichsweb URL into your library's web pages, prepend your EZproxy prefix to the beginning of the Ulrichsweb URL. For example, the URL you will embed into your library's website may look something like this:

```
http://proxy.university.edu/login?url=https://ulrichsweb.serialssolutions.com
```
