Question

What are the rules for setting the end punctuation by program fix_doc_punctuation_usm? Which characters are set for which subfield?

Answer

The rules for program fix_doc_punctuation_usm are as follows:

Field 245

Subfield a - dot at the end when there is no following subfield

- colon at the end when subfield b follows
- slash at the end when subfield c follows

Subfield b - dot at the end when there is no following subfield

- slash at the end when subfield c follows

Subfield c - dot at the end

Field 260 and 264

Subfield a - dot at the end when there is no following subfield

- colon at the end when subfield b follows
- comma at the end when subfield c follows

b - dot at the end when there is no following subfield

- comma at the end when subfield c follows

c - dot at the end

Field 300

Subfield a - dot at the end when there is no following subfield

- colon at the end when subfield b follows

- semicolon at the end when subfield c follows

Subfield b - dot at the end when there is no following subfield

- semicolon at the end when subfield c follows

Subfield c - dot at the end when there is no following subfield

Relevant for all fields: the ending dot is only added when there is not a dot at the end, e.g. when having 300\$a245 p. no dot will be added.
