

Difference between ILL archiving services ill-88 and ill-72

- **Product:** Aleph
 - **Product Version:** 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Question

What is the difference in ill archiving between services ill-88 and ill-72.

Answer

Ill-88: This service enables archiving of inactive ILL Borrowing requests (Z410 records) in the ill library xxx40. Inactive requests are request which their status is one of the following: Cancelled, Closed, Deleted, Expired, Unfilled.

Ill-72: This service enables archiving of ILLSV documents. The archived records are written into the archive directory at ILLSV library's root. The ILLSV library (ILL Server Library) is relevant only in sites that use the ISO ILL protocol type. The ILLSV library is used as repository for all ILL APDU messages that are received at your site.
