

## manage-50 is not creating sys number in holding record

- **Product:** Aleph
  - **Product Version:** i22, 23
  - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
- 

### Description

For holding records the following fix routine is set in xxx60/tab/tab\_fix in order to add 001 (ALEPH system) to the newly created record.:

```
INS2 fix_doc_001
```

It's working fine when a record is updated/created in the Catalog GUI. But when using manage-50 (create holdings and item records based on information from bibliographic record) ffor the record creation field 001 isn't build. Is there a way to add 001 automatically?

### Resolution

Add the fix to routine MNG50 in the HOL library. Please see here the description from the tables header:

```
! MNG50 is run automatically when the Create Holdings and Item Records Using  
! Bibliographic Data (p-manage-50) services is used. The fixes are performed  
! on the ADM and HOL records created by the service.
```
