
Intota: Adding ProQuest Ebooks Databases

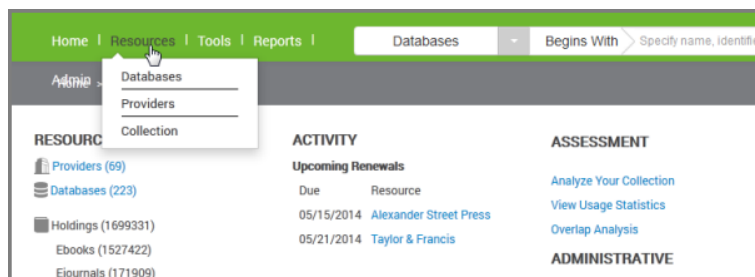

- **Product:** Intota
-

What does my library need to do when we add a ProQuest Ebooks database?

May 31, 2017 Update: Changed example Custom URL.

When your library adds a ProQuest Ebooks database, you need to use the following procedure to ensure your patrons can access content from your ProQuest discovery and management services (such as the A-to-Z list, Summon, 360 Link, etc.):

1. In Intota, access the resource's Database Details page by clicking **Resources** on the menu bar and then selecting **Databases** in the submenu.

2. Find the database and click on it to go to its **Database Details** page.
 3. Click **Edit** next to the **Configuration** section of the Database Details page, and in the **Database URL** field, enter the custom URL that you use to access the database. Use all lower-case letters. For example, your library's URL will be <http://ebookcentral.proquest.com/lib/xxxxxx>, where "xxxxxx" will be substituted by your library's Site ID for ProQuest Ebooks.
 - **Do not** include a trailing slash in this URL (for example, <http://ebookcentral.proquest.com/lib/xxxxxx/> is incorrect).
 - If the link is incorrect, then that will break the direct linking in Summon.
 4. Click **Save**.
 5. Use the Support Portal (accessible via the More Sites drop-down list above) to notify us so that we can create your custom, **title-level** links.
 - In your request, include the following:
 - The database name; and
 - Your ProQuest Ebooks Custom URL.
