## Setup mode debug for ldap - pc server (authn\_staff\_DEBUG)

- **Product:** Aleph
  - **Product Version:** 20 and up
  - **Relevant for Installation Type:** Multi-Tenant Direct, Dedicated-Direct, Local, Total Care
- 

### Question

How to setup the debug mode for authentication ldap for pc\_server?

### Answer

In file \$alephe\_root/pc\_server\_defaults added this line:

```
setenv authn_staff_DEBUG Y
```

Restart pc\_server and GUI

To deactivate the debug mode:

```
setenv authn_staff_DEBUG N
```

**Warning: with debug mode, the password of users appear unencrypted**
