

---

## Cannot scroll to all search results in Resource Discovery

---

### Scenario

A search in Resource Discovery returns over 8,000 results, however when we scroll through the results it is not possible to scroll past the 4000th result.

---

### Explanation

This behavior is governed by this value in `/exlibris/dtl/u3_1/dtle/www_server.conf`:

```
setenv set_result_set_limit      4000
```

(See page 467 of DigiTool Configuration guide)

[https://knowledge.exlibrisgroup.com/@api/deki/files/26661/DigiTool\\_Configuration\\_Guide.pdf](https://knowledge.exlibrisgroup.com/@api/deki/files/26661/DigiTool_Configuration_Guide.pdf)

---

### Solution

The value of `setenv set_result_set_limit` was changed to 10000, and the www server was restarted (`start_w` at the terminal as dtl user)

After this it was possible to scroll through the entire result set.

### Note:

The maximum allowed value is 20,000
