

## Call Number won't display in ILLiad Z39.50 client

---

### Question

ILLiad Atlas client searches Alma using Z30.50 correctly, however Call Number is not displayed in the ILLiad client.

### Answer

Please check the ILLiad Customization Manager for the Z39.50. In the call number field there should be no space between callNumber and the +. Once confirmed, re-open ILLiad and try the search again.

### Additional Information

The Online Help page for Z39.50 setup on the Alma side can be found [here](#).
