
Read-Only staff user

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description

Is there an alternative way to make a read-only staff user in the Aleph 23 GUI than by creating one that has all functions/sub-functions defined as "Display" for each individual library in the GUI Staff Privileges -- Access Rights":

For Example:

xxx50

Items Control

Items - Display List

Item - Display Form

History - Display History List

Invoice field - Display Invoice Field

Resolution

This is the only way we know of, but note that in order to display a BIB record without changing it, use the `./xxx01/pc_tab/catalog/permission.dat ...` (hide Section - Case DetailsCase Details).
