

## Struts2 vulnerabilities

- **Product:** Aleph
  - **Product Version:** 20, 21, 22, 23
  - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
- 

### Description

We have been alerted to a significant increase in scanning for a critical vulnerability to Apache Struts2:

<https://arstechnica.com/security/2017/03/critical-vulnerability-under-massive-attack-imperils-high-impact-sites/>

<https://threatpost.com/attacks-heating-up-against-apache-struts-2-vulnerability/124183/>

Can we confirm that public facing systems hosted with Exlibris (Aleph's apache, primo, sfx, verde, metalib) are not vulnerable to this attack?

### Resolution

The Ex Libris Security Officer has replied: "Ex Libris has been made aware of a recently discovered vulnerability in STRUTS2. THIS VULNERABILITY DOES NOT AFFECT EX LIBRIS PRODUCTS. As a precaution, Ex Libris has blocked the signature for this vulnerability in Ex libris Cloud and Hosted vulnerability protection systems."
