

expand_doc_bib_avail THRESHOLD parameter

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description

We have serial records with hundreds of items. If we specify "THRESHOLD=10", will expand_doc_bib_avail stop after 10 items?

Resolution

In the case of serials (items with a non-blank Z30-ENUMERATION-A value), Aleph will pass a value of "Check holdings" to Primo, rather than "available" or "not-available".

"THRESHOLD=" is used to determine in the case of a title with many *copies* how many it will check for availability (before defaulting to "check holdings").
