

Rosetta login screen display issue after 5.2 upgrade

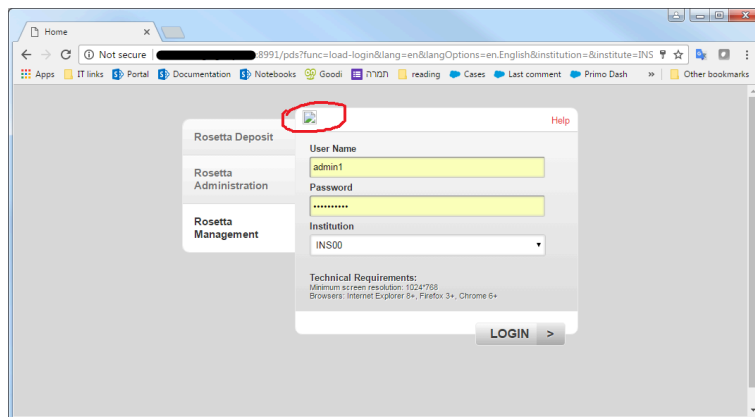

- **Product:** Rosetta
- **Product Version:** 5.2

Relevant environments

1. Rosetta 3.1 sp has been installed in the past
2. PDS is on the Rosetta server
3. PDS login html was not customized

Problem description

Rosetta Login screen has a broken link to the ExLibris logo:

Cause

Under `/exlibris/dps/d4_1/pds/html_form/calling_system-dps/images`

`logo-main.png` is a soft link that points to a non-existing file

`logo-main.png` -> `/exlibris/dps/d4_1/system.dir/thirdparty/jboss/server/default/deploy/digitool.ear/dps-backoffice-web.war/images/1/logo-main.png`

This happens because the `jboss` directory no longer exists after installing the 5.2 service pack.

Solution

Remove the current soft link and create a new link to

/exlibris/dps/d4_1/system.dir/thirdparty/tomcat/rosetta-webapps/dps-backoffice-web.war/images/1/logo-main.png

```
ln -s "/exlibris/dps/d4_1/system.dir/thirdparty/tomcat/rosetta-webapps/dps-backoffice-web.war/images/1/logo-main.png" "/exlibris/dps/d4_1/pds/html_form/calling_system-dps/images/logo-main.png"
```
