

Error 0423 while running file-90 and file-96

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description

While running both file-90 (Advanced Generic Vendor Records Loader) and file-96 (Generic Vendor Records Loader), the following lines appear in the job log (located in the \$alephe_scratch directory):

```
Error number: 0423
```

```
000000001 - (0423)Mismatch between delivery type and vendor delivery type.
```

What causes this, and what is the effect on the results of the job?

Resolution

This error code means that the default "Order Delivery Type" defined in the tab_loader_def file (when running file-90) or tab_96_def file (when running file-96) does not match the Delivery Type field in the relevant Vendor record. This error is more of a warning. It does not prevent the creation of an Order record. The Order record is created using the value from the relevant default definition table.
