

## Aleph to Alma migration: Items with temporary locations

- **Product:** Aleph
  - **Product Version:** 20, 21, 22, 23
  - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
- 

### Description

If an item has a temp location in Aleph (z30\_temp\_location Y), will this item have both the permanent (HOL record location) and the temporary location in Alma?

### Resolution

Yes. When Z30-TEMP-LOCATION=Y, we migrate the library/locations stored in the HOL record (field 852) / ADM record (field Z30) as the permanent location, and the information in z30\_sub\_library / z30\_collection as the temporary location.
