

## ISBN match method not applied

- **Product:** Alma
- 

### Description

Using an import profile, the "ISBN match method" for non-serial records is not applied.

### Resolution

The reason might be that the "001 to MMS ID Match Method" is used for serial records.

If this method is selected for serial, it will be used for non-serial as well, and the setting in the non-serial match method is ignored.
