

Related but not interchangeable titles are displayed in Getit

- **Product:** Alma
-

Symptoms

Physical related titles are displayed in Getit and requests can be placed on them. This behavior is also true for remote relations indicated in MARC fields such as 777. 786, 800. 830 etc.

This might be a problem for fulfillment, when even though these titles are related, they are not interchangeable.

Defect Status

ExLibris Development is handling this issue, there is no estimated date at the moment.

Additional Information
