

## What terms are included in the 'Did You Mean' index?

- **Product:** Primo
  - **Product Version:** All versions
  - **Relevant for Installation Type:** Multi-Tenant Direct, Dedicated-Direct, Local, Total Care
- 

The 'Did you mean' index is based on local data (everything that is loaded into Primo via a pipe); it contains all terms that occur in the index more than 5 times in the fields 'title' or 'creator'.

Activate Deep Search Did You Mean:

> If activated this option in Search Configuration - it attempts to use the remote did you mean first, and if found none – uses local did you mean.

> If non-activate – uses local did you mean.

For more information about this parameter, see the [Search Engine Configurations](#).

Since Primo Central data comes from an external system it is not included the the local Did You Mean index.
