

Booleans don't work after a certain number of search terms

- **Product:** Voyager
 - **Relevant for Installation Type:** Multi-Tenant Direct, Dedicated-Direct, Local, TotalCare
-

Symptoms

After a certain number of search terms are entered into a boolean argument in a Builder search, the "NOT"ed terms are included rather than excluded.

Defect Status

Issue VYG-6977 is resolved for Voyager 10.0.0 and higher.

Workaround

Some searches can be completed via GDC using the "exclude" feature in a scan job run on a record set comprised of the results of the first 2 booleans.
