

## GUI customization lost during Version Check

- **Product:** Aleph
- **Product Version:** 22,23

### Symptoms

Version Check on Startup returns GUI left pane to default size.

### Replication Steps

We noticed this only happens with Left Pane resizing. The other customization remains unchanged.

### Workaround

Run Version Check from Aleph menu after opening the client. Do not use Version check on startup if you have your left pane GUI resized /customized.

- **Relevant for Installation Type:** Multi-Tenant Direct, Dedicated-Direct, Local, TotalCare
- 

Insert parts here, from the Template list.
