
Journalsearch is not available (different unix username)

- **Product:** SFX
 - **Product Version:** version 4
 - **Relevant for Installation Type:** Local
-

If the public names of your sfx instances are different from the unix usernames, for example sfx_local vs sfxlcl41, you may need to make manual changes to the local_httpd.config file.

1. Login to SFX server as local instance and open following file for edit:
 - /exlibris/sfx_ver/sfx4_1/<local instance>/config/local_httpd.config
2. Manually change instance name in 5 new RewriteRule directives in the beginning of the file or run following commands if you use 'vi' editor (mind spaces in second command):
 - :%s/ Vold_name/new_name/
 - :%s/ Vold_name/ Vnew_name/
3. Restart local Apache

The 5 new rewrite rules that were added to the local_httpd.config file are:

- RewriteRule ^/sfx_local(-[^\+]*)?/api/sfxmenu/openurl/(.+) /sfx_local/cgi/core/api.cgi?restidentifier=sfxmenu&sfx.institute=\$2&\$3 [QSA,PT,E=__INST_URL_PART:\$1]
- RewriteRule ^/sfx_local(-[^\+]*)?/api/configuration/([^\+]+)/([^\+]*)? /sfx_local/cgi/core/api.cgi?restidentifier=configuration&control_group=\$2&control_section=\$4 [QSA,PT,E=__INST_URL_PART:\$1]
- RewriteRule ^/sfx_local(-[^\+]*)?/api/journalsearch/([^\+]+)/([^\+]*)/(.+) /sfx_local/cgi/core/api.cgi?restidentifier=journalsearch&profile=\$2&searchtype=\$3&searchterm=\$4 [QSA,PT,E=__INST_URL_PART:\$1]
- RewriteRule ^/sfx_local(-[^\+]*)?/api/multilanguage/([^\+]+)/([^\+]*) /sfx_local/cgi/core/api.cgi?restidentifier=multilanguage&language=\$2&group=\$3 [QSA,PT,E=__INST_URL_PART:\$1]
- RewriteRule ^/sfx_local(-[^\+]*)?/journalsearch(.*) /sfx_local/az\$2?param_perform_value=journalsearch [QSA,PT,E=__INST_URL_PART:\$1]
