

Bulk item process status updates based on barcode

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description

Is it possible to update item process statuses in bulk using a text file of item barcodes? I am familiar with updating process statuses in bulk using ret-adm-01 and manage-62, but manage-62 requires a list of item record numbers and our staff is wondering if we can do this with a list of barcodes instead.

Resolution

You can take your file of barcode numbers and use it as input to the manage-70 (Convert record keys) Service, specifying "BARCODE-TO-ITEM" as the Convert Type. Then you would use the output as input to manage-62.
