

IIIF Manifest Delivery Fails

- **Product:** Rosetta
 - **Product Version:** 5.3 , 5.3.0.1 and above
-

Symptoms

IIIF manifest generation fails.

Cause

Hotfix 5.3.0.1 addresses a few issues to enable IIIF Manifest delivery. One of the fixes implemented is a replacement of the delivery xsl file "mets2manifest.xsl".

In a case the file was manually modified by the user between the 5.3 and 5.3.0.1 installations, the installation will not replace the file. In this case, a manual edit is needed.

Resolution

The following are instructions to edit "mets2manifest.xsl" manually:

1. Connect to the Management module and select the appropriate institution
-

Note

This is an institution-level configuration.

2. Files >XSLGo to: Home > Deposits > Advanced Tools > Delivery
mets2manifest.xsl
 3. Click "Edit"
 4. The xsl should be like the attached [mets2manifest.xsl](#)
The changes are:

line 222: removed }

line 365: added }

5. Click "Save"
