
Bib record with diacritics not retrievable by title

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description

We are unable to search for a particular bib record (014030881) by title. The record contains various special characters/diacritics.

Resolution

The following SQL shows *all* of the ACC Browse index (z01) entries for this bib record:

```
xxx01@ALEPH0> select z01_rec_key from z01, z02 where z01_acc_sequence = substr  
(z02_rec_key,1,9) and Z02_DOC_NUMBER = '014030881';
```

Try retrieving the record by the title index codes (TTL, Tlx, TTLx, Tlxx, etc.) shown in the results. If the z01_rec_key is incorrect, then take the filing procedure (specified in column 5 of the relevant xxx01 tab00.lng entries) and examine the xxx01 tab_filing table lines for this filing procedure. Noting in particular any

```
11 N char_conv          FILING-KEY-nn
```

lines.

The tab_filing header has the following info for char_conv:

```
! - char_conv: perform character conversion procedure according  
!               to the procedure name listed in col.4. This name must  
!               match procedure identification in col.1 of  
!               /alephe/unicode/tab_character_conversion_line
```

For example, if tab_filing col. 4 has "FILING-KEY-10", then the relevant line in tab_character_conversion_line is "FILING-KEY-10".
