

Aleph Service Packs during Aleph to Alma migration

- **Product:** Aleph
 - **Product Version:** 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description

We're moving from Aleph to Alma. We're on Aleph version 22. what should we do about Aleph Service Packs between now and the time we migrate?

Resolution

Alma does not require any particular v22 Service Pack level. It will work with any v22 Service Pack.

I'd say that until May, 2018, which I believe will be the last v22 Service Pack, you can proceed as you normally would: check the Service Pack description and see if there are fixes which it seems that you need. If so, then install the Service Pack.

(But you may want to minimize changes of all kinds in the months immediately preceding the cutover.)
