

## Item policy in import profile not considered

- **Product:** Alma
- 

### Description

We have an import profile for physical items, and we use physical item mapping in the "Inventory Information" tab.

Entering a field and subfield for the item policy has no effect.

Item policies from the import files are ignored.

### Resolution

Use item policy codes, not the names.

While the dropdown contains the names, the codes are expected.

You can find the codes in the Fulfillment Configuration Menu > Item Policy.
